AW60 Toda AW60

342 and of sufficient dimensions to entirely block up the entrance. This sliding door is inside the hut, and so arranged and fixed on two stout stakes buried in the earth, and standing to the height of 2½ to 3 feet, as to be easily moved to and fro. There are no other openings or outlets of any kind, either for the escape of smoke, or for the free ingress and egress of atmospheric air. The doorway itself is of such small dimensions that, to effect an entrance, one has to go down on all fours, and even then much wriggling is necessary before an entrance is effected. The houses are neat in appearance, and are built of bamboos closely laid together, fastened with rattan, and covered with thatch, which renders them water-tight. Each building has an end walling before and behind, composed of solid blocks of wood, and the sides are covered in by the pent-roofing, which slopes down to the ground. The front wall or planking contains the entrance or doorway. The inside of a hut is from 8 to 15 feet square, and is sufficiently high in the middle to admit of a tall man moving about with comfort. On one side there is a raised platform or [352] pial formed of clay, about two feet high, and covered [825] with sāmbar (deer) or buffalo skins, or sometimes with a mat. This platform is used as a sleeping place. On [354] the opposite side is a fire place, and a slight elevation, on which the cooking utensils are placed. In this part [353] of the building, faggots of firewood are seen piled up from floor to roof, and secured in their place by loops of rattan. Here also the rice-pounder or pestle is fixed. [415] The mortar is formed by a hole dug in the ground, 7 to 9 inches deep, and hardened by constant use. The other household goods consist of three or four brass dishes or plates, several bamboo measures, and some- [412] times a hatchet. Each hut or dwelling is surrounded
